

Exercise and health referral networks

To safely and effectively deliver exercise programs that meet a broad range of client needs, Registered Exercise Professionals and fitness business operators will typically need support and expertise from a range of disciplines including the exercise, sport, primary health, allied health, government & non-government health sectors.

Professional Associations and peak bodies in fitness, exercise and sports medicine provide specific, evidence-based guidelines that should be a first point of contact for professional practice and will often refer to the relevant underlying evidence that might relate to prescription of a particular activity or delivery of services to a specific population group or setting. Examples include:

www.fitness.org.au/guidelines.html

www.essa.org.au/about-us/position-statements/

www.sma.org.au/resources/

www.acsm.org/about-acsm/policy-center

Non-Government Organisations (NGOs) such as peak health organisations or major chronic disease groups are also a valuable source of data (such as condition prevalence, risk factor rates and population demographics) and an important point of support for your clients. There are a few examples of evidence-based condition-specific programs that can be delivered directly by fitness industry service providers, such as Lift for Life, Heart Moves, Lungs In Action, and the Beat It: Physical Activity and Lifestyle Program.

NATIONAL GOVERNMENT DEPARTMENTS & AGENCIES

Department of Health and Ageing (DoHA)

www.health.gov.au

This Commonwealth Department has a diverse set of national responsibilities including advising policy, improving program management, research, regulation and partnerships with other government agencies, consumers and stakeholders.
